Boxes & Margin

pdfcpu is a tool for PDF manipulation written in Go.

Usage:

```
pdfcpu command [arguments]
```

The commands are:

validate	validate PDF against PDF 32000-1:2008 (PDF 1.7)
analyze PDF	analyze PDF by getting a list of resources, page resources
split multi-page PDF	split multi-page PDF into several single-page PDFs
concatenate 2 or more PDFs	concatenate 2 or more PDFs
extract	extract images, fonts, content, pages out of a PDF
tree	create a tree diagram of a PDF
version	print pdfcpu version

Single-letter Unix-style supported for commands and flags.

The `pdfcpu help [command]` for more information about a command.

[illegible]

Positioned Imageboxes with margin

pdfcpu is a tool for PDF manipulation written in Go.

usage:

```
pdfcpu command [arguments]
```

The commands are:

validate	validate PDF against PDF 32000-1:2008 (PDF 1.7)
metrics	extract PDF metrics of resource page resources
split	split multi-page PDF into several single-page PDFs
merge	concatenate 2 or more PDFs
extract	extract image, fonts, content, pages out of a PDF
tree	create binary version of a PDF
version	print pdfcpu version

Single-letter Unix-style supported for commands and flags.

Use "pdfcpu help (command)" for more information about a command.

```

lsyncd is a tool for file synchronization between two or
more servers.

Usage:
    lsyncd command [arguments]

The commands are:
    validate      validate the configuration file
    daemonize     daemonize the process
    help          print this help message
    init          initialize the daemon
    reload        reload the daemon
    status        print the status of the daemon
    stop          stop the daemon
    test          test the configuration file
    version       print the version of the daemon

```

[illegible]

pdfcpu is a tool for PDF manipulation written in Go.

Usage:

```
pdfcpu command [arguments]
```

The commands are:

validate	validate PDF against PDF 32000-1:2008 (PDF 1.7)
optimize	optimize PDF by getting rid of redundant page resources
split	split multi-page PDF into several single-page PDFs
concatenate	concatenate 2 or more PDFs
extract	extract images, fonts, content, pages out of a PDF
extract	create trimmed version of a PDF
print	print pdf to version

Single-letter Unix-style shortcuts for commands and flags.

Use `pdfcpu help [command]` for more information about a command.

```

lsmpipe is a tool for the PIR manipulation: version is 0.6
Usage:
    pipsmpipe command [arguments]

The commands are:

validate          validate PIR against the 2006-04-2006 OMR 6.75
optimize         optimize PIR for getting rid of maximum pipe resources
width            width reduction: remove unused width from PIRs
concat           concatenate 2 or more PIRs
extract           extract the PIRs of interest; pages not of a PIR
sort             sort the PIRs
link             create linked version of a PIR
print            print pipsmpipe version

Single-line list-style separator for commands and flags.

Use "help" help command for more information about a command.
